

Seasons Of Care

A QUARTERLY REPORT OF YOUR STANDARD SERVICES FROM STAY GREEN INC.

Stay Green's Standard Fall Services

Many of your plants go dormant in the fall, but your Stay Green team is as busy as ever!

Fall is your landscape's season of transition, when the high-growing summer season gives way to shorter days and cooler temperatures. That change of pace requires special care from Stay Green. We take the extra steps needed to ensure a beautiful landscape during this slower-growing season and prepare your landscape for the coming winter.

Weed Control

Weed seeds are in the ground, waiting to germinate after the winter rains. By applying a pre-emergent herbicide, we stop weeds before they sprout. Treatment must be done now for maximum effectiveness.

Drainage System Maintenance

Our crews inspect v-ditches and drains, and remove debris that could cause a blockage. Drainage systems must be regularly maintained to prevent damaging erosion, or even flooding.

Pruning

As cooler temperatures slow plant growth, it's the perfect time to prune shrubs and trees under twelve feet, to promote healthy growth in the months to come. We prune shrubs by hand to avoid unnecessary plant damage.

Leaf Debris Removal

Changing temperatures prompt trees to drop their leaves. We stay busy clearing leaf debris from lawns, planters and sidewalks.

Fertilization

By augmenting soil nutrients, we keep lawns lush, shrubs, color, and trees healthy as they prepare for spring.
