

Safety Is No Accident!

Is your hardscape a trip? Stay Green's experts can eliminate those unsightly (and dangerous) hardscape hazards.

Over time tree roots, traffic and general exposure to the outdoor elements can cause pavers and other hardscapes to shift and become unstable and loose.

In addition to creating trip hazards, these un-level conditions can cause water to pool, accelerating the deterioration process.

Being proactive on your hardscapes can eliminate unnecessary costly lawsuits from trip and slip hazards.

SERVICES

- Refresh decomposed granite pathways and patios
- Repair paver pathways
- Create new pathways in high traffic/cut through areas
- Replace raised/damaged path edging
